Thm: A soluble form is produced by proteolytic processing
isoform 1 in the extracellular domain (By similarity).
SIMILARITY: Belongs to the SCF family.
                                                                                                              4182BE9AED00793B CRC64;

                                                                                                                                                                                                                                                                                                                                                                                                                         TUNCTION: Stimulates the proliferation of mast cells. Able to FUNCTION: Stimulates the proliferation of both myeloid and lymphoid hematopoietic progenitors in bone marrow culture. Mediates also cell-cell adhesion. Acts synergistically with other cytokines, probably interleukins.

SUBGUNIT: Homodimer, non-covalently linked (Probable).

SUBGINIT: Homodimer, non-covalently linked (Probable).

SUBGILLUAR LOCATION: Type I membrane protein (isoforms 1 and 2) Also exists as secreted soluble form (isoform 1 only) (By similarity).
                                                                                                                                                      PROTEIN SEQUENCE OF 26-39.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Name=2; Synonyms=KL-2; ISO 000025; ISOId=P21581-2; Sequence=VSP 006025; ISOId=P21581-2; Sequence=VSP 006025; DEVELOPMENTAL STACE: Acts in the early stages of hematopoiesis. PTM: A soluble form is produced by proteolytic processing of isoform 1 in the extracellular domain. SIMILARITY: Belongs to the SCF family.

-I- FUNCTION: Stimulates the proliferation of mast cells. Able to augment the proliferation of both myeloid and lymphoid hematopoietic progenitors in bone marrow culture. Mediates also cell-cell adhesion. Acts synergistically with other cytokines, probably interleukins.
-I- SUBGURIT: Homodimer, non-covalently linked (Probable).
-I- SUBCELLULAR LOCATION: Type I membrane protein (isoforms 1 and 2).
-I- SUBCELLULAR is as a secreted soluble form (isoform 1 only) (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               PARTIAL PROTEIN SEQUENCE OF 26-78.

Able to augment the proliferation of both myeloid and lymphoid hematopoietic progenitors in bone marrow culture. Mediate also cell-cell adhesion. Acts synergistically with other cytokines, probably interleukins (By similarity).
SUBGNIT: Homodimer, non-covalently linked (Probable).
SUBGRILULAR LOCATION: Type I membrane protein. Also exists as a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 P79368; Q28591;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      (Potential).
(Potential).
(Potential).
secreted soluble form (By similarity).

PTM: A soluble form is produced by proteolytic processing of extracellular domain (By similarity).

SIMILARITY: Belongs to the SCF family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Ξ,

Patent No. 2507454

GENERAL INFORMATION:

APPLICANT: Seebo, Krisztina M.

APPLICANT: Bosselam, Robert A.

APPLICANT: Wartin, Francis H.

ITILE OF INVENTION: Wethod for Enhancing the Efficiency of Gene

TITLE OF INVENTION: Transfer with Stem Cell Factor (SCF) Polypeptide

CORRESPONDENCE ADDRESS:

ADDRESSEE Marshall O'Toole Geretein Murray & Borun

STREET: GAOG Sears Tower, 233 South Wacker Drive

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Bosselman, Robert A. Suggs, Sidney V. Martin, Francis H. TITLE OF INVENTION: Stem Cell Factor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 61, Application US/09635251
Patent No. 6759215
GENERAL INFORMATION:
APPLICANT: Zsebo, Krisztina M.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             TELECOMMUNICATION INFORMATION:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   SEQUENCE CHARACTERISTICS:
LENGTH: 273 amino acids
TYPE: amino acid
TOPOLOGY: linear
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   TELEPHONE: 312/474-6300

carcinoma cell line. Non-naturally occuring SCF and C-terminally carcinoma cell line. Non-naturally occuring SCF and C-terminally curring SCF stimulate growth of printitive funciative of naturally occuring SCF stimulate growth of printitive progenitors such as haemaclopicatic progenitor cells, neural stem cells and primordial germ stem cells. The peptides can be used in a composition of contracting leucopenia, anaemia or thrombocycopenia, for enhancing engrathment of bone marrow during transplantation or for bone marrow recovery after chemotherapy or radiation-induced bone marrow aplasia or myelosuppression. They can also be used for treating neoplasia, nerve damage, infertlilty, intestinal damage or myelosupoliferative disorders. Antibodies may be raised against the peptides for use in detection or house and severe combined immunodeficiency (SCID) states alone or in combination with other factors such as IL-7. The present sequence representing human SCF (stem cell factor) protein is isolated from the 5637 bladder carcinoma cell line. The present invention crlates to novel stem cell factors (AAU02453, AAU02460) and the polymucleotides encoding them. SCF stimulate primitive progenitor cells including early haematopoietic progenitor cells. The invention also describes SCF peptides (AAU02462-AAU02481) and the oligonucleotides (AAS040117) used in the isolation of human and rat SCF sequences. The polymucleotide encoding SCF is useful for producing SCF and useful in compension of the sequences. The polymucleotide encoding SCF is useful for producing SCF and useful in compension in the isolation of human and rat SCF sequences. The polymucleotide encoding SCF is useful for treating disorders involving blood cells cuch as myelofibrosis, metastatic carcinoma, acute leukaemia, multiple myeloma, Hoddxin's disease, lymphoma, Gaucher's disease, ansemia, congestive splenomegaly, Kala azar, sarcoidosis, military tuberculosis, disseminated fungus disease, Pulminating septicemia, malaria, vitamin B12 and folic acid deficiency, pyridoxine deficiency, and hypopigmentation construction and vitiligo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    121 KOLKKSFRSPEPRLFTPBEFFRIFMRSIDAFKDFVVASETSDCVVSSTLSPEKGKAKNPP 180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes a method for enhancing (B) the efficiency of transfer of a polynucleotide (I) into a target mammalian cell (II) in vitro, comprising exposing (II) that expresses a stem cell factor (SCP) receptor to a biologically active SCP, its analogue or fragment, which induces cell proliferation, and introducing (I) to (II) in vitro. Exposure of SCF to (II) results in increased uptake of (I) into the cell. The method is useful for enhancing the efficiency of the transfer of a polynucleotide into a target mammalian cell in vitro. The method is useful in gene therapy techniques. Ad443301 to Ad443364 and AAB98351 to AAB98390 represent sequences used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             KDLKKSPKSPBPRLFTPBBFFRIFNRSIDAFKDFVVASETSDCVVSSTLSPBKGKAKNPP 180

                                    The present invention provides the protein and coding sequences of mammalian stem cell factors (SCF8). These are capable of stimulating the growth of early haematopoietic progenitor cells, neural stem cells and primordial germ stem cells. The sequences are useful in the treatment of leukaemias, haematopoietic disorders, aplastic anaemia, paroxysmal neuroglobinuria, malaria, pigmentation disorders, neurological and intestinal damage, infertility, AIDS and severe combined immunodeficiency (SCID). The present sequence is an SCF described in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel isolated non-human mammalian stem cell factor polypeptide stimulating growth of early hematopoietic progenitor cells, useful for treating aplastic anemia, lymphoma, Letterer-Siwe disease, Kala azar, sarcoidosis.
                                                                                                                                                                                                                                                                                                                                                                Human; rat; mammal; stem cell factor; SCP; cell growth stimulation; gene therapy; haematopoietic disorder; aplastic anaemia; leukaemia; neurological damage; intestinal damage; infertility; AIDS; SCID; severe combined immunodeficiency.

isolated from the 5637 bladder carcinoma cell line. The present invention relates to novel stem cell factors (AAB73561-AAB73568, AAB73571-AAB73576) and the polymucleotides encoding them. SCF stimulate primitive progenitor cells including early haematopoietic progenitor cells. The invention also describes SCF peptides (AAB73578-AAB73597) and the oligonucleotides (AAH73895) used in the isolation of human and rat SCF sequences. The polymucleotide encoding SCF is useful for producing SCF and useful in gene therapy. It is useful for treating disorders involving blood cells such as welofibrosis, metastatic carcinoma, acute leukaemia, multiple myeloma, Rodgkin's disease, lymphoma, Gaucher's disease, anaemia, congestive splenomegaly, Kala azar, sarcoidosis, military tuberculosis, disseminated fungus disease, Pulminating septicaemia, malaria, vitamin hypopigmentation disorders such as piebaldism and vitiligo
                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                 180

The present sequence representing human SCF (stem cell factor) protein is isolated from the 5637 bladder carcinoma cell line. The present invention relates to novel stem cell factors (AAU02761-AAU02776), AAU02770-AAU02775, AAU02779) and the polynuclectides encoding them. SCF stimulate primitive progenitor cells including early haematopoietic progenitor cells. The invention also describes SCF peptides (AAU02777-AAU02794) and the coligonuclectides (AAS04182-AAS04218) used in the isolation of human and rat SCF sequences. The polynuclectide encoding SCF is useful for rat SCF sequences. The polynuclectide encoding SCF is useful for treating disorders involving blood cells such as myelofibrosis, metastatic carcinoma, acute leukaemia, multiple myeloma, Hodgkin's disease.

Iymphoma, Gaucher's disease, anaemia, congestive splenomegaly, Kala azar, arcoidosis, military tuberculosis, disease, canaemia, them seminated fungus disease, rulminating septicemia, malaria, vitamin Bl2 and follc acid deficiency, pyridoxine deficiency, and hypopigmentation disorders such as piebaldism
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          181 GDSSLHWAAMALPALFSLIGFAFGALYWKKRQPSLTRAVENIQINEEDNEISMLGEKER 240
